## DETAILED ACTION

### *Claim Rejections - 35 USC § 101*

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 9-11 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 9-11 are drawn to a "program" *per se* as recited in the preamble and as such is/are non-statutory subject matter. See MPEP § 2106.IV.B.1.a. Data structures not claimed as embodied in computer readable media are descriptive material *per se* and are not statutory because they are not capable of causing functional change in the computer. See, e.g., *Warmerdam*, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure *per se* held nonstatutory). Such claimed data structures do not define any structural and functional interrelationships between the data structure and other claimed aspects of the invention, which permit the data structure's functionality to be realized. In contrast, a claimed computer readable medium encoded with a data structure defines structural and functional interrelationships between the data structure and the computer software and hardware components which permit the data structure's functionality to be realized, and is thus statutory. Similarly, computer programs claimed as computer listings *per se*, i.e., the descriptions or expressions of the programs are not physical "things." They are neither computer components nor statutory processes, as they are not "acts" being performed. Such claimed computer programs do not define any

Art Unit: 2626

structural and functional interrelationships between the computer program and other claimed elements of a computer, which permit the computer program's functionality to be realized. In addition the specification discloses that the "machine-readable medium" shall be taken to include, but not be limited to, solid-state memories, optical and magnetic disks and carrier wave signals, as discussed above (pages 6 and 19-20as noted. However, it is noted that a machine-readable medium is not necessarily computer-usable and also that this medium includes a carrier wave signal, in which carrier waves are not considered to be a physical form.

***Allowable Subject Matter***

3. Claims 1-2, 4-8 and 12-21 are allowed.

The following is a statement of reasons for allowance:

As for independent claims 1, 6, 12, 15 and 18, it discloses a method, apparatus and system for specifying arbitrary words in rule-based grammars. Prior art such as Schmid, Beutnagel and Evans teach a similar method, apparatus and system but fails to specifically teach a method, apparatus and system wherein the generic and non-generic words that are part of a particular application are assigned a higher confidence level than the generic and non-generic words that are not part of the particular application, thereby bypassing the need to specify all possibilities of spoken words at the time a rule-based grammar is written.

***Conclusion***
